

FocalSpot, Inc. Celebrates Five Years in Business by doubling facilities/production capabilities to accommodate growth

San Diego, California (September XX, 2008) – FocalSpot, Inc (www.focalspot.com), a leading provider of affordable, high-quality inspection and rework solutions to the EMS marketplace, celebrated their fifth year in business by doubling their facility size. The additional space is contiguous with the FocalSpot corporate office located at 9915 Businesspark Avenue, in the Scripps Ranch area of San Diego County, California.

Facilities include:

- Expanded demonstration and training facilities
- Expanded manufacturing, assembly and equipment/parts warehousing
- General administrative business operations and service support offices
- Spacious applications, prototype and R&D lab for product development
- Additional space for "Ready-Spares" and "Pre-Owned Refurbishment" programs

"We have expanded our facilities, our work force, our partners, service programs and entered into new global geographic markets during some rather uncertain times in our served market," said Mr. Fred Schlieper, President and CEO of FocalSpot, Inc. With the passing of our fifth year of operation we are pleased to announce a facility expansion that will effectively double our production and service capacity, while providing the infrastructure required to increase new product developments and support new service programs," continued Mr. Schlieper. "We believe that FocalSpot has enjoyed such rapid growth and loyal customer following based on our low-cost, high-performance, high-value products and excellence in customer service. It's all very gratifying and exciting to be in such a win-win situation, to be able to better serve our customers while solidly securing our own future," concluded Mr. Schlieper.

Service Programs served by the expansion include:

"Ready Spares" — this program provides our customers priority access to an extensive stock of x-ray tubes and key components. This provides our customers with added peace of mind by getting them back up and running quickly and minimizing critical systems down time due to component diagnostic and order cycles.

"Pre-Owned Refurbishment" — this program provides factory-level restoration of pre-owned x-ray inspection systems certified to meet as close to new equipment standards available in a pre-owned product. FocalSpot further stands behind our restored pre-owned systems as a continued source for parts, service and support; including ready spares and extended warranty options.

About FocalSpot, Inc.
